SC10 — 10 MHz high-stability ovenized quartz oscillator

## SC10 Ovenized Quartz Oscillator

- **SC-cut crystal for low phase noise**
- **$2 \times 10^{-12}$  Allan variance (1 s)**
- **Low aging ( $<2 \times 10^{-10}$ /day)**
- **+15 or +24 VDC operation**
- **Flexible electronic frequency control**

The SC10 is a high-stability, ovenized 10 MHz quartz oscillator that combines excellent phase noise, Allan variance, and aging characteristics. Using an SC-cut crystal for lowest phase noise characteristics, and an innovative electronic double oven temperature controller to minimize temperature gradients, the SC10 achieves a one second Allan variance of  $2 \times 10^{-12}$  and an aging rate of only  $2 \times 10^{-10}$ , making it ideal for virtually any precision timing application.

### Convenient Options

A number of options can be specified to match the SC10's performance to your requirements. +15 or +24 VDC operation can be specified, and the output is available on SMA, SMB, and SMC connectors, or on a single pin. Aging, noise, temperature stability, and operating temperature range can all be separately specified in one of three grades so you only pay for the performance you need. Electronic fine tuning (EFC) is available with a number of tuning ranges and slopes.
