

Near Field Probe Kit Live Tracking A Rapid Handheld Probe Scanning Solution

**4 x Probes available per kit
Various frequency probes included**

**x10 Optical Zoom USB Mini
Camera included**

**11 inch Adjustable Arm Support
Included**

**Fully intergrated with EMViewer
software**

**EMC Troubleshooting Low Cost
Solution**

**TEST
ON-SITE**

**RESULTS IN

Near Field Probes Kit

These probes are used to locate, identify, measure, and characterize potential sources of electromagnetic radiation. Interference radiated from traces or components of electronic

Live tracking provides a faster, easier, and more reliable method to get these results. Using an overhead webcam and probe markers, EMViewer will detect the type of probe and point of measurement automatically, allowing design engineers to see results quickly with minimal setup time.

Distribution in the UK & Ireland
